

Valve Guides & Seat Inserts

For engine rebuilders, cylinder-head workshops and parts importers

1. IDENTIFY THE APPLICATION

Engine make / complete model / version: _____

Cylinder-head reference (if known): _____

Part: valve guide / seat insert Position: intake / exhaust / unknown

OE / FarDrive reference (if known): _____

2. RECORD THE SAMPLE, THEN CONFIRM THE REQUIRED SPECIFICATION

Outer diameter: _____ mm Inner diameter: _____ mm

Guide length / seat height: _____ mm Quantity per reference: _____

Measurement state: removed worn sample / installed / drawing / new sample

Photograph the whole part, markings and each measurement. Add flange, groove or step details. A worn measurement is not automatically a nominal production dimension.

3. REBUILDER: CLARIFY THE REPAIR REQUIREMENT

Standard or repair size requested: _____

Drawing / revision / tolerances / material requirements: _____

State unknown fields explicitly. Interference, finished bore, chamfers and radii need the agreed drawing and application requirements. Dimensions alone do not establish an OE match.

4. IMPORTER: MAKE QUOTATIONS COMPARABLE

Destination country / city: _____

Packing / sample quantity / requested delivery terms: _____

Use the same specification, material, order quantity, packing and inspection scope for each quotation. Confirm MOQ, price validity, lead time and payment terms in writing.

5. AGREE THE SAMPLE AND INSPECTION PLAN

Sample approval / dimensional and material evidence required: _____

FarDrive coordinates specification checks, quotations, samples and supplier follow-up. Fitment, supply, certification and delivery are confirmed for the specific order.
